

Industrial Strength IBM Infrastructure

Power Cloud

IBM Power Hybrid Cloud

IBM Power Hybrid Cloud - On Premise, our cloud, other clouds and Power VS

We can host your infrastructure in our Australian-based data centres with 24 x 7 support. Available infrastructure includes IBM power, Intel and SAN storage

Industrial Strength, IBM Infrastructure

Now with our IBM Cloud services you can securely acquire Power Systems (IBMi, AIX and Linux) processing and storage capacity in the private cloud on demand. We tailor your environment to your specific needs while maintaining flexible capacity on demand for your future growth.

Integrated Power and Intel Workloads

Integrate IBM Power workloads with general intel server workloads easily with a unified solution offering both Power and Intel computing platforms.

PowerCloud offers a number of additional features to enhance the experience and delivery of the services hosted on the platform. Some of these services include rack space for customer owned hardware, software for the hosted servers, internet services and management services.

Choice:

OneTeam offers a variety of models for hosting your Power Systems workloads. You can choose to collocate your own systems in our secure and modern data centres, run your workloads on our platforms either in our data centres or on the IBM Power Virtual Server cloud, and choose whether you'd like to manage your workloads yourself, or have our experienced, Australian-based team take care of everything for you.

Flexible Communications

You can choose from a variety of connectivity options, including 'bring your own' communications, our SD WAN capability, dedicated point to point or internet connections, and co-located network equipment.

Australian-based:

Our platform is hosted within Australia in datacentres in Brisbane, Melbourne and Sydney. Our technical team manage the platform 24x7. Your data never leaves the country.

Security:

OneTeam employs a rigid structure to manage technician access to the PowerCloud platform. The approach is multi-layered controlling both remote and physical access. Coupled with this NextDC manages physical access to the datacentre via ID Access Cards [IDACs], which are linked to the IDAC holder with biometric fingerprint security. Each technician has individually allocated IDAC's which enables logging of access to the racks.

Physical access to the Rack will be restricted to authorised OneTeam personnel. Each client's environment is hosted on a virtually defined and segregated system. This extends from remote access, firewall, network, systems and storage.

ISO 27001:

OneTeam IT is ISO27001 certified (June 2023) and has implemented numerous controls to ensure we maintain the highest standards of information security.

HA/DR:

If Disaster Recovery or High Availability are on your mind, we have easy and affordable options on all of the previously mentioned platforms, guided by the same people at OneTeam who provide those services to some of Australia's largest banks, insurers, manufacturers and other businesses.

CORE BENEFITS:

Data copy

Secure a Disaster-Recovery-as-a-Service site on our Power Cloud. Help ensure your mission-critical applications, systems of records, IBM Db2® transactions or ERP/CRM plans remain resilient with off-site, high-availability resources.

Grow at your own pace

Extend your Power workloads onto IBM Power Systems Virtual Servers without heavy upfront costs. Help keep budgets under control with transparent pricing and pay-as-you-use billing.

Choose your deployment

Select your system and customise cores, storage, network, OS and more. Let OneTeam's experienced team fully manage it for you or opt for a self-service model.

Run your workloads when and where you want

Bring more capacity to your Power infrastructure — on-demand. Stay competitive and agile with flexible management both on premises and off premises.

People that really know Power:

OneTeam can support your business with people who have deep understanding of the Power Systems platform. Our nearly four decades of experience provides you with peace of mind and access to people who can help you make the most of your technology investment. We can also help with application development, integrations, modernisation and digital transformation.

ONETEAM IT:

KEY COMPETENCIES:

- Cyber Security
- Business Continuity
- Managed Services
- Software Licensing
- Cloud & Hybrid Cloud
- WAN, VPN & Mobility
- Moving, Sharing & Migrating Data
- IBM Power, IBM i, AIX, Linux, Intel
- Mobile integration and development
- Network consultancy and outsourcing
- Servers, Hosting, Storage and Backup
- Application modernisation, hosting and development
- B2B and EDI design, consulting, programming and implementation
- End user computing and associated devices.

CONSULTING

- Cyber Security
- HCL Domino
- System Design
- Architecture
- Telecommunications
- Operating Systems Management
- ERP – Whatever your ERP, whatever your platform, we can analyse, protect and integrate your data
