QUICKTRANS

B2B INTEGRATION AT A 'LITE' PRICE

When trading electronically with customers or vendors, it's common for you to exchange files with them. What's not so common is for those file formats to integrate into your back-end applications without alteration.

You may need to alter or translate the message into your ERP's format in order to fulfil orders accurately and on-time.

For small to medium business, the stand out too is QuickTrans.

QUICKTRANS ALLOWS FOR:

Translation of file systems from one format to another.

Integration into your ERP system.

Copying, inserting, deleting or archiving of files by users.

Extraction from, or insertion of data into SQL Server or DB2 databases, Google Big Query, or flat files.

QUICKTRANS IS:

EASY: QuickTrans is easy to understand, configure and manage and comes with a handy dashboard to help users keep visibility and control of file operations.

SECURE: Supports SSHP keys and key files. SFTP is used for communication between remote machines, and remote file transfer.

BULLET-PROOF: QuickTrans can run unattended when you are logged off. You can also control what transactions to run on what days, then leave it to do its job.

COMPLIANT: With QuickTrans you can easily meet trading partner Service Level Agreements (SLAs).

COST EFFECTIVE: From $3,000 + gst per year or $275 + gst per month.
